

defining the line

# THERMOPLASTIC

Thermoplastic Truck Mounted Stripers

# There's an invisible line between ordinary We believe performance-driven

- Designed by experienced striping professionals with careful consideration given to high volume output capability, service-ability, ease of operation and dependability.
- Heavy duty construction to assure long service life and reduce overall maintenance.
- High volume hydraulic and material delivery system enables simultaneous application of centerline and edgeline markings.
- Comprehensive parts and service manuals with general operation instructions, troubleshooting guide and specific systems and component information.

Canopy to protect equipment and operators.

Safety and warning light package.

Safe, automatic, electronic pre-melter ignition system.

Combination English/Metric stripe control system.

Pre-melter interconnect with valve to enable all melters in one color.

Choice of propane or diesel fired heating system.

Auxiliary material inlet to enable refilling pre-melters from a different source.

Equipped with electronically controlled linear actuators for fast line width control without tools.

Material recirculation system for precise pressure control.

Vacuum bead loading system.

"Auger" enhanced agitator shaft for superior material mixing.

Superior material pre-melting capability assures faster start ups and more productive applications.

"Mailbox type" pre-melter material feed chutes with safety vent for operator safety.

Gun actuating solenoids protected from the elements.

## Thermoplastic Truck

and extraordinary.

engineering and innovative design make the difference.

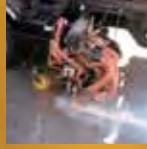

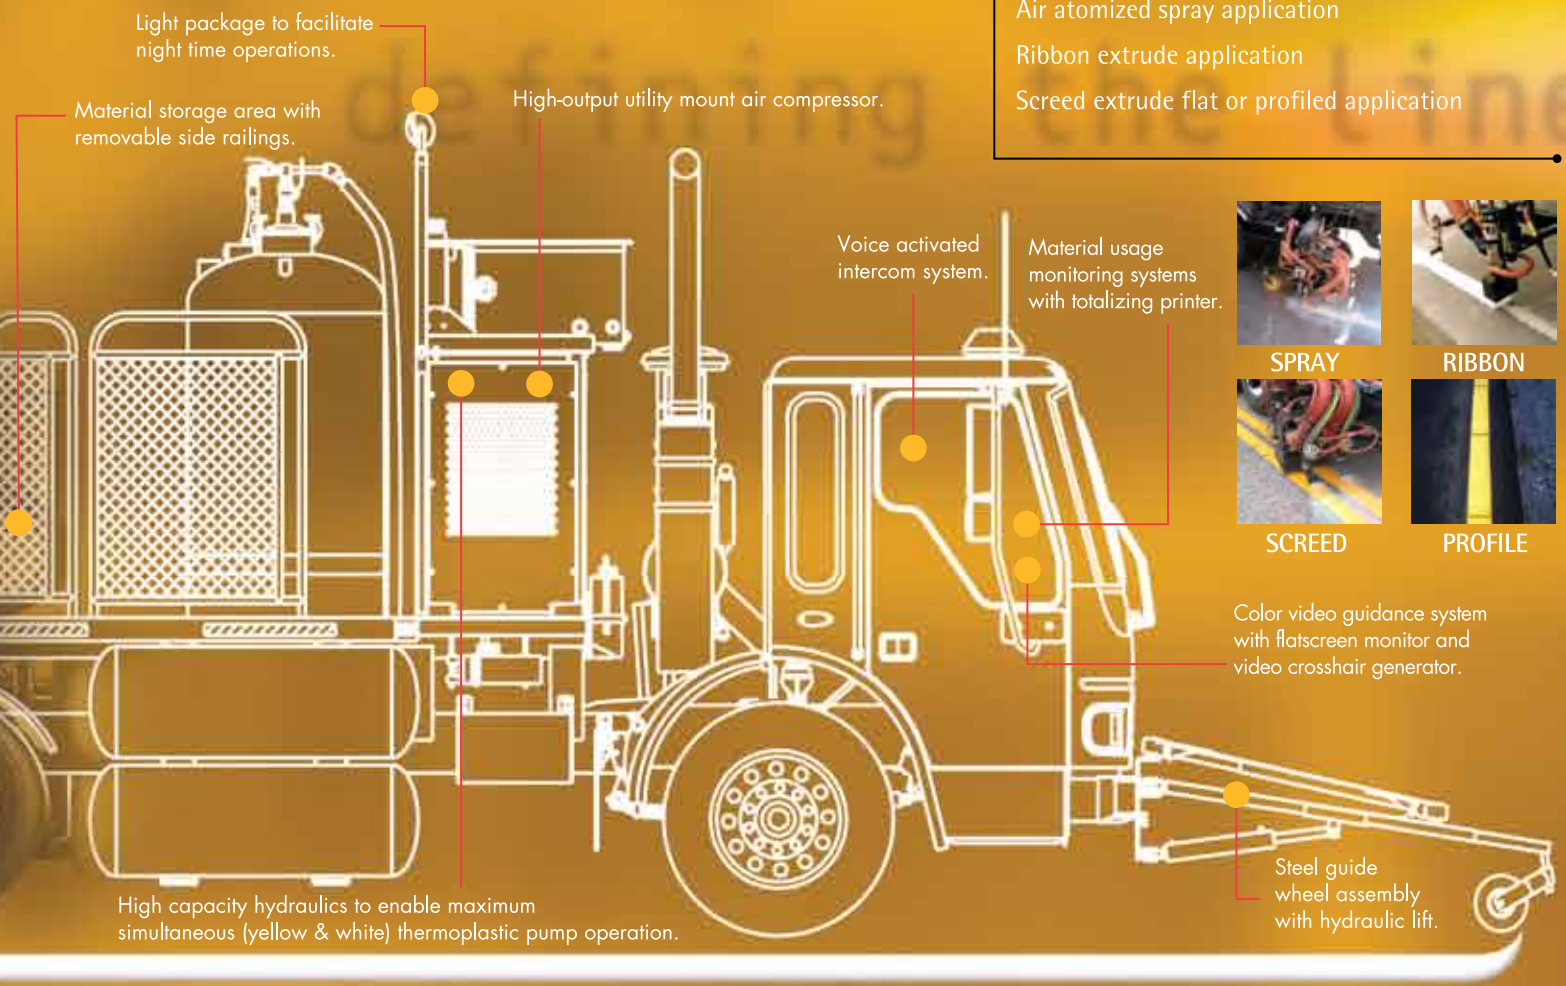

- Large inventory of replacement parts at factory with trained staff support.
- Expert service technicians available for operational training and quality "after the sale" support.

Pump Or Pressure Tank

SYSTEMS available to provide:

- Air atomized spray application
- Ribbon extrude application
- Screed extrude flat or profiled application
